

ABSTRACT

A mobile studio is provided for designing and/or fabricating corrugated paperboard products. The studio includes a cutting table disposed in the enclosure for cutting and scoring sheets of corrugated paperboard. A computer is also disposed in the enclosure for designing the product and controlling the cutting table. The
5 studio may be transported to a customer's location to design and fabricate a prototypical corrugated paperboard product (e.g. POP displays and packaging) on-site.
